

# Garden Curriculum Project

Twenty-seven participants who attended session on garden curriculum at Wisconsin Dells are learning how to use the gardening tips in aligning the lesson plans with the Wisconsin Model Early Learning Standards that ties in with the projects.

Participant ready to start with curriculum folders and their first project in front of them,

Demonstrating recycled containers with vegetables and how to care for them.

Demonstrating a container garden.

Participants are smelling and feeling plants for a sensory garden.

Showing how to make the small indoor compost in a recycled pop jug.

Participants took home containers, projects and curriculum activities.

With the generous help of the Grant County Master Gardeners I was able to hand out various resources to all individuals to take home and integrate into their gardening curriculum immediately. Each participant was able to take home a four pack of mixed annuals that I was able to purchase for \$4 a flat.
